

ARE YOUR KIDS VACCINATED AGAINST COVID-19?

Kids aged 5-11 can now be vaccinated against COVID-19

Safe & Effective

The vaccine is **safe and effective** for kids in this age group and side effects are generally mild and only experienced for a short period.

Keep Mob Safe

Kids can spread the virus to other vulnerable people including Elders and people with chronic illness and make them very sick.

Vaccinate your kids to help keep the community safe from this nasty virus!

After Vaccination

There are some common side effects that can be experienced by kids, they are:

Pain, redness and/or swelling where the needle was received

Mild fever

Headache

Studies in Australia have found that kids ages 5-11 are reporting fewer side effects than older Australians.
